

Save Energy, Reduce Waste – Protect the Environment AND Reduce Costs with the EcoBusinessPlan Vienna (ÖkoBusinessPlan Wien)!

Goals: To decrease operating expenses and increase environmental protection – to generate ‘green and clean’ practices and profits - through the realisation of different measures (“Maßnahmen”) within your company. These measures include different ways on how to reduce waste products or cut down on the usage of drinking water, just as they show you how to save valuable resources and reduce the overall energy consumption of your enterprise.

The offer is good for all companies based in Vienna and includes: professional and funded (environmental-)consulting, guidance in the realisation of measures developed by the consultancy service, support in handling different (additional) subsidy opportunities, legal security, as well as public relations/image improvement.

A first environmental check (“Umweltcheck”) for your company! You get one to two hours of individual on-site consulting – an “as-is-analysis”. About a week later the consultant will provide you with potential (non-obligatory) measures and savings.

!!our SPECIAL OFFER to you!!
!!The ENVIRONMENTAL CHECK (Umweltcheck) for FREE!!

How does it work?

Sign up and spend about two hours with a professional consultant (worth 560€) and get many new ‘green ideas’ on how to save money with **no obligation** to realize any of the consultant’s suggestions!

The ÖkoBusiness Plan Wien is an internationally renowned environmental project. Since 1998 about 700 companies have participated and more than 10.000 measures have been realized resulting in the saving of:

- 47,1 Mio€ in operating expenses
- 2 Mio. M³ drinking water or the equivalent of 670 Olympic-size swimming pools
- 115.000t refuse (garbage) or the 1.5 times the size of the Ernst-Happel-Stadion
- 175 GWh Energy or the equivalent of the annual energy supply for 60 000 households
- 86 Mio. km Transportation milage or the equivalent of driving round the globe 2000 times
- 21.000 tonnes of resources, containing 6.600t hazardous waste and 51.500t CO₂
